

Wilkinson Construction Consultants take the headache out of compliance providing general and specific fire risk assessments, to meet your needs.

Fire Risk Assessment : The Regulatory Reform (Fire Safety) Order 2005 (RRO) requires occupiers of premises to appoint a responsible person and to regularly assess the fire safety measures in the form of a detailed fire risk assessment. Company Owners, Directors and Managing Agents could face large fines (up to £400,000) and even imprisonment for non-compliance or for conducting an inadequate assessment. You are also at risk of invalidating your insurance cover in the event of a fire occurring.

## Why choose Wilkinson Construction Consultants?

Unlike many of our competitors our fire risk assessments are conducted and/or authorised by a qualified fire engineer (MIFireE)

Our assessments are compliant with the guidance in the RRO but also include recommendations on compliance with Building regulation Approved Document B: Fire Safety

All risk assessments are backed up with supporting photographic evidence

We can provide a simple pdf report or a fully hosted on line solution for owners of multiple sites.

All our reports now include the risk rating calculated in accordance with BS 9999 - Code of practice for fire safety in the design, management and use of buildings.

We can include CAD drawings denoting fire safety equipment in accordance with international standard ISO 6790

We are market leaders in providing Construction phase risk assessments to address risk to occupied building during construction and refurbishment work.

We can provide post-assessment support and assistance in obtaining building regulation consent for any alterations that are required.
